SUMMARY OF FINDINGS

DIAGRAM 1. TRADES QUALIFIED PERSONS BY TRADE EMPLOYMENT STATUS, 1993

Source: Tables 1.1 and 2.8

Trades qualified persons

At May 1993, there were an estimated 1,520,200 trades qualified persons aged 15 to 64 years in Australia, compared to an estimated 1,343,700 persons in 1989, an increase of 13 per cent. The number of males increased by 13 per cent, whilst the number of females increased by 20 per cent.

Of these trades qualified persons:

- 49 per cent were working in the trade of their qualification, compared to 54 per cent in 1989;
- 34 per cent were working outside the trade, which is similar to the proportion in 1989 (35%); and
- 7 per cent were unemployed, a significant increase from the 1989 survey (3%) (Table 1.1 and Diagram 1).

Of persons with trade qualifications, 91 per cent were males, which is the same proportion as in the 1989 survey (Table 1.1).

More qualified tradespersons had gained their qualification in Building (338,900) than any other field of trade. The field of trade which showed the largest increase in trades qualified persons between 1989 and 1993 was Hairdressing, with a rise of 22 per cent. Other significant increases were seen in Building and 'Other' (up 17%) and Metal fitting and machining (up 16%) (Table 1.2 and Diagram 2).

Approximately four out of five trades qualified persons were born in Australia. Of those who were born overseas, almost half came from the main English speaking countries. The proportions were much the same in 1989.

DIAGRAM 2. TRADES QUALIFIED PERSONS BY FIELD OF TRADE QUALIFICATION, 1989 AND 1993

Source: Table 1.2

DIAGRAM 3. TRADES QUALIFIED PERSONS BY AGE, 1989 AND 1993

Source: Table 1.3

An estimated 49 per cent of trades qualified persons born in the main English speaking countries were working in the trade at the time of the survey, compared to 59 per cent in 1989 (Tables 1.3 and 1.9).

The proportion of Australian born trades qualified persons working in the trade also fell (53% down to 49%) in the same period.

Some 30 per cent of trades qualified persons were aged 25 to 34 years and a further 26 per cent were aged 35 to 44 years, much the same proportions as in 1989 (Table 1.3 and Diagram 3).

An estimated 78 per cent (1,184,500) qualified in a trade by completing an apprenticeship in Australia. Of these persons, 31 per cent qualified before 1970, 25 per cent in the period 1970 - 1979, 32 per cent in the period 1980 - 1989, and 12 per cent from 1990 to the survey date (Table 1.7).

Trades qualified persons who were working

An estimated 85 per cent of trades qualified males were working at the time of the survey compared with 61 per cent of females. In 1989, the proportions were 91 per cent and 69 per cent respectively (Table 1.1).

Approximately 84 per cent of the 1,264,500 trades qualified persons who had a job were working in the private sector. Trades qualified persons worked predominantly within the Manufacturing (24%), Wholesale and retail trade (21%) and Construction (20%) industries (Table 1.8).

Some 51 per cent of trades qualified persons with a job gave an occupation within the Tradespersons category. Some 17 per cent gave an occupation within the Managers and administrators or Professionals categories (Table 1.8).

DIAGRAM 4. PROPORTION OF TRADES QUALIFIED PERSONS WORKING IN THE TRADE BY AGE, 1989 AND 1993

Source: Tables 1.3 and 1.9

DIAGRAM 5. TRADES QUALIFIED PERSONS WHO HAVE A JOB: PROPORTION WORKING IN THE TRADE BY FIELD OF TRADE QUALIFICATION, 1993

Source: Table 1.8

Trades qualified persons working in the trade

Just under half (49%) of trades qualified persons were working in the trade at the time of the survey (Table 1.1).

The proportion working in the trade decreased with age, from 69 per cent for the 15 - 24 age group to 25 per cent for the 55 - 64 age group. In 1989, 36 per cent of those aged 55 - 64 years were working in the trade in which they qualified (Tables 1.3 and 1.9, Diagram 4).

The proportion of employed trades qualified persons who were working in the trade varied between the fields of trade in which they qualified, ranging from 71 per cent for persons who had qualified in the Building trade to 50 per cent in 'Other' (Table 1.8 and Diagram 5).

Trades qualified persons who have had a break from the trade and subsequently returned

One in five trades qualified persons who have worked in the trade have had at least one break of 12 months or more, with a subsequent return to the trade. This is similar to findings from the 1989 survey (Table 2.1).

Of the estimated 287,300 persons who have had a break of 12 months or more from the trade, 29 per cent stated the main reason for their first break was that they wanted a change or were dissatisfied with their job. The main reason given by 58 per cent of females who have had a break from their trade was 'Family, personal or ill health' (Table 2.5).

Some 41 per cent of trades qualified persons who have had a break had been in the trade less than 3 years before their first break (Table 2.5).

The most common reason given for returning to the trade was 'No other work available or work available in the trade' (44%) (Table 2.6).

Trades qualified persons who have left the trade

An estimated 48 per cent of trades qualified persons who had worked in the trade were not working in the trade of their qualification at the time of the survey (Table 2.2). Of those persons, 449,200 (66%) were working outside the trade (Table 2.8).

Approximately 21 per cent had left principally because they were laid off or there was a lack of work, whilst a further 21 per cent left principally because they wanted a change or were dissatisfied with their job. Some 59 per cent of females left their trade principally because of family, personal or ill health reasons (Table 2.7).

Some 40 per cent (270,800) of those who had left the trade had spent less than 5 years in the trade. The Hairdressing field recorded the highest overall loss from the trade, with 59 per cent of those ever qualified in that field having left the trade (Tables 1.2 and 2.7).

An estimated 371,400 trades qualified persons who had left the trade would not consider returning to the trade, representing 55 per cent of this group. Of these persons, 42 per cent left the trade during the period 1980 - 1989 (Table 2.8).

Trades' qualified persons working outside the trade

An estimated 522,900 trades qualified persons were working outside the trade, including 73,700 who had never worked in the trade in Australia (Tables 1.1 and 2.8).

Of those working outside the trade, 47 per cent never use their trade skills, 29 per cent use their trade skills at least

once a week and 24 per cent use their trade skills occasionally (Table 1.8).

Some 72 per cent of females working outside the trade never use their trade skills, compared to 44 per cent of males (Table 1.8 and Diagram 6).

TABLE 2.8. TRADES QUALIFIED PERSONS WHO HAVE LEFT THE TRADE : FREQUENCY OF USE OF TRADE SKILLS, MAIN FACTOR THAT WOULD ENABLE A RETURN TO TRADE AND YEAR LAST LEFT TRADE
AUSTRALIA, 1993
('000)

	<i>Year last left trade</i>				<i>Total</i>
	<i>Before 1970</i>	<i>1970 - 1979</i>	<i>1980 - 1989</i>	<i>1990 to survey date</i>	
Frequency of use of trade skills —					
Working, not in the trade	56.0	88.3	204.4	100.5	449.2
Use trade skills at least once a week	16.5	26.8	57.8	32.8	133.9
Use trade skills occasionally	10.5	19.9	55.7	25.4	111.4
Never use trade skills	29.0	41.6	91.0	42.3	203.9
Not working	32.2	23.5	73.7	102.9	232.3
Main factor that would enable a return to trade —					
Would consider returning to the trade (a)	10.3	33.8	120.4	145.5	310.0
No other work available or work available in trade (b)	* 4.9	21.7	59.1	98.3	184.0
Better pay, promotion or improved career prospects	* 1.3	* 5.2	27.2	19.6	53.3
Other	* 4.0	* 6.9	34.1	27.6	72.7
Would not consider returning to the trade	77.9	78.0	157.7	57.9	371.4
Total	88.1	111.8	278.1	203.4	681.4

(a) Includes those who are unsure whether they would consider returning. (b) Includes those who are currently looking for work in the trade.

TABLE 2.9. TRADES QUALIFIED PERSONS WHO HAVE LEFT THE TRADE : MAIN REASON LAST LEFT TRADE, MAIN FACTOR THAT WOULD ENABLE A RETURN TO TRADE, AGE AND FIELD OF TRADE QUALIFICATION
AUSTRALIA, 1993
('000)

	<i>Metal fitting and machining</i>	<i>Other metal</i>	<i>Electrical and electronics</i>	<i>Building</i>	<i>Vehicle</i>	<i>Food</i>	<i>Hair- dressing</i>	<i>Other</i>	<i>Total</i>
Main reason last left trade —									
Laid off, or lack of work	25.2	15.4	24.4	33.7	20.2	* 4.8	* 4.1	17.9	145.8
Sought better pay, lack of career prospects or promoted	31.6	9.5	22.2	17.5	23.5	9.5	* 2.7	15.3	131.8
More job security or sought better physical working conditions	11.5	* 4.2	* 5.1	16.6	9.0	* 2.6	* 0.9	* 4.9	54.8
Wanted a change, or dissatisfied with job	30.3	* 5.1	18.7	17.9	19.9	10.1	14.9	24.8	141.6
Family, personal, or ill health	12.9	* 5.3	10.5	26.7	14.7	11.3	28.3	29.0	138.8
Other	9.8	* 4.2	13.3	8.1	* 7.2	* 5.7	* 5.0	15.4	68.6
Main factor that would enable a return to trade —									
Would consider returning to the trade (a)	50.8	19.2	51.0	56.6	41.6	22.7	23.8	44.2	310.0
No other work available or work available in trade (b)	31.2	12.0	33.2	34.1	26.1	14.9	* 7.8	24.7	184.0
Better pay, promotion or improved career prospects	8.0	* 4.7	8.6	9.3	8.2	* 3.5	* 5.1	* 6.0	53.3
Other	11.6	* 2.5	9.3	13.3	* 7.3	* 4.3	10.8	13.5	72.7
Would not consider returning to the trade	70.5	24.5	43.1	63.9	52.9	21.2	32.1	63.2	371.4
Age (years) —									
15 — 24	* 4.8	* 2.5	* 5.4	* 6.2	* 7.9	* 4.9	* 2.9	* 5.0	39.6
25 — 34	34.7	13.0	24.9	26.8	28.1	13.5	17.7	22.9	181.6
35 — 44	26.3	10.7	25.9	32.6	26.6	* 5.8	16.4	25.4	169.7
45 — 54	28.6	* 7.0	20.7	25.8	18.5	14.3	10.9	25.2	151.0
55 — 64	26.9	10.6	17.3	29.1	13.4	* 5.4	* 7.9	28.9	139.6
Total	121.4	43.7	94.2	120.5	94.5	44.0	55.9	107.4	681.4

(a) Includes those who are unsure whether they would consider returning. (b) Includes those who are currently looking for work in the trade.

SECTION 3. POPULATION SUMMARY

TABLE 3.1. POPULATIONS AND STATE OR TERRITORY OF USUAL RESIDENCE, 1993
(^{'000})

<i>Populations</i>	<i>NSW</i>	<i>Vic.</i>	<i>Qld</i>	<i>SA</i>	<i>WA</i>	<i>Tas.</i>	<i>NT</i>	<i>ACT</i>	<i>Aust.</i>
<i>Population 1:</i> Trades qualified persons	548.0	353.3	290.8	121.2	136.3	34.7	15.1	20.8	1,520.2
<i>Population 2:</i> Trades qualified persons who have a job	453.9	294.2	241.8	99.9	114.1	29.8	12.8	18.0	1,264.5
<i>Population 3:</i> Trades qualified persons working in the trade	265.5	179.8	139.6	56.0	65.5	16.9	8.1	10.2	741.6
<i>Population 4:</i> Trades qualified persons who have worked in the trade	511.0	328.6	277.0	113.3	126.2	33.3	14.2	19.5	1,423.0
<i>Population 5:</i> Trades qualified persons who have had a break from the trade	108.3	44.6	72.1	21.7	24.2	7.9	4.3	4.3	287.3
<i>Population 6:</i> Trades qualified persons who have left the trade	245.5	148.7	137.4	57.3	60.6	16.4	6.1	9.3	681.4
<i>Population 7:</i> Trades qualified persons who have never worked in the trade in Australia	37.0	24.8	13.9	7.9	10.1	* 1.3	* 0.8	* 1.4	97.1
<i>Population 8:</i> Trades qualified employees	312.4	195.4	165.0	73.7	77.3	20.8	10.3	13.2	868.2
<i>Population 9:</i> Unrecognised tradespersons	260.7	238.6	157.9	92.1	97.6	24.9	10.8	20.9	903.6
<i>Population 10:</i> Unrecognised tradespersons who have a job	186.0	169.7	108.7	66.5	79.4	20.4	7.9	18.4	656.9
<i>Population 11:</i> Unrecognised tradespersons working in the trade	60.9	66.6	39.3	23.4	32.7	5.2	2.6	6.0	236.7
<i>Population 12:</i> Unrecognised tradespersons who have worked in the trade	236.5	220.2	147.2	86.8	90.6	23.7	10.6	19.5	835.0
<i>Population 13:</i> Unrecognised tradespersons who have had a break from the trade	38.7	41.0	36.1	18.4	18.5	4.1	* 2.4	4.4	163.5
<i>Population 14:</i> Unrecognised tradespersons who have left the trade	175.5	153.6	107.8	63.4	57.9	18.5	8.0	13.5	598.3
<i>Population 15:</i> Unrecognised tradespersons who have never worked in the trade in Australia	24.3	18.4	10.7	5.3	7.0	* 1.2	* 0.2	* 1.4	68.6
<i>Population 16:</i> Unrecognised tradespersons who are employees	140.4	114.1	74.9	45.3	52.1	13.8	6.2	11.8	458.7
<i>Population 17:</i> Persons with unrecognised trade qualifications	63.3	50.7	35.0	16.2	25.1	3.5	* 1.4	4.1	199.3

EXPLANATORY NOTES

Introduction

This publication presents results from the Career Paths of Tradespersons component of the Survey of Training and Education, which was conducted throughout Australia during April and May 1993. This component obtained information about persons with trade qualifications recognised in Australia, as well as unrecognised tradespersons.

2. Information collected includes frequency of use of trade skills, trade qualification details, and occupational mobility (i.e. time in trade, reason left trade, field of trade, breaks from trade, etc.). A full list of data items is included in this publication, starting at page 27.

Scope

Geographical Areas

3. The survey was conducted in both rural and urban areas in all States and Territories.

Dwellings

4. The survey covered both private and 'special' dwellings. Private dwellings are houses, flats, home units, and any other structures used as private places of residence at the time of the survey. Special dwellings are hotels, motels, hostels, hospitals, caravan parks, work camps on construction sites, etc.

Persons

5. The survey included all persons aged 15 to 64 years, except:

- members of the permanent defence forces;
- certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
- overseas residents in Australia;
- members of non-Australian defence forces (and their dependants) stationed in Australia;
- persons who were permanently unable to work;
- boarding school pupils not resident in households, some patients in hospitals and sanatoriums and inmates of gaols, reformatories, etc.; and
- persons aged 15 to 20 years still at school.

6. In *The Labour Force, Australia* (6203.0), persons who work in their own limited liability company (either with or without other staff) are classified as employees. For this survey, persons who work in their own limited liability company are classified as either employers or self-employed, depending on whether or not they employ other staff apart from themselves.

7. In addition, estimates of employees in this publication include some who are excluded from estimates of employees in *The Labour Force, Australia* (6203.0).

These are wage or salary earners who were away from work:

- on worker's compensation and were not returning (or were unsure about returning) to their employer;
- for 4 weeks or more without pay; or
- because they were stood down without pay for less than 4 weeks (for reasons other than bad weather or plant breakdown).

8. In *The Labour Force, Australia* (6203.0) these persons would be classified as unemployed or not in the labour force, according to their activity in the reference week.

Coverage

9. Coverage rules were applied which aimed to ensure that each person eligible on scope was associated with only one dwelling and hence has only one chance of selection.

Data collection methodology

10. Households were selected at random using a sample similar to that of the monthly population survey. The monthly population survey, which is described in *The Labour Force, Australia* (6203.0), comprises the monthly labour force and supplementary topics and is based on a multi-stage area sample of private dwellings (about 31,000 houses, flats, etc.) and a list sample of special dwelling units.

11. The Survey of Training and Education was conducted over six weeks, during April and May 1993, with an initial sample of around 18,600 dwellings. After allowing for sample loss (e.g. household selected in the sample had no residents in scope for the survey, derelict buildings, buildings under construction, etc.), the effective sample was some 12,600 dwellings. Information was then collected from the target population through personal interviews with trained interviewers.

Definitions

12. Unless otherwise stated, all characteristics referenced in this publication relate to the week before the interview.

13. Definitions of the main field of study for post-school qualifications appearing in this publication are given in the *Australian Bureau of Statistics Classification of Qualifications (ABSCQ)*, 1993 (1262.0).

Results of the survey

14. The estimates in this publication refer to information collected over 6 weeks and, due to seasonal factors, may not be representative of other periods throughout the year.

15. Results of the previous survey were published in *Career Paths of Persons with Trade Qualifications, Australia, 1989* (6243.0). The results of a similar survey conducted in 1982 were also published with the same title and catalogue number.

Unpublished tables

16. As well as the statistics included in this and related publications, the ABS may have other relevant unpublished data available. Inquiries should be directed to the contact officer named at the front of this publication.

Comparability with previous surveys

17. Results from this survey are directly comparable with the survey conducted in 1989. However, due to considerable differences in scope, collection methodology and content, care should be taken in any comparisons with the survey conducted in 1982.

Survey sample redesign

18. The sample used for this survey was designed and selected using information collected in the 1991 Population Census. The sample for the 1989 survey was based on information collected in the 1986 Population Census. As a result, the standard errors used in this survey differ from those used in the 1989 survey.

Estimation procedure

19. The estimates were derived by use of a ratio estimation procedure. This ensures that the estimates conform to an independently estimated distribution (based on the average of the months of April and May) of the population for each capital city and remainder of State by age and sex, rather than to the corresponding distribution within the sample itself.

Reliability of the estimates

20. Estimates in this publication are subject to sampling and non-sampling errors. For further information refer to the Technical Notes, page 22.

Related publications

21. Other ABS publications which may be of interest include:

Average Weekly Earnings, States and Australia (6302.0) — issued quarterly

Award Rates of Pay Indexes, Australia (6312.0) — issued monthly

Career Experience, Australia (6254.0) — issued irregularly, first and latest issue: February 1993.

Distribution and Composition of Employee Earnings and Hours, Australia (6306.0) — issued annually

Employer Training Expenditure, Australia (6253.0) — issued irregularly, latest issue: July to September 1993.

Employer Training Practices, Australia (6256.0) — new issue: February 1994, issued October 1994.

Information Paper: Training and Education Experience, Australia — Sample File on Magnetic Media (6274.0) — issued irregularly, latest issue: 1993.

The Labour Force, Australia (6203.0) — issued monthly.

Labour Force Status and Educational Attainment, Australia (6235.0) — issued annually, final issue February 1994.

Labour Mobility, Australia (6209.0) — issued two-yearly from February 1992, latest issue: February 1994.

Training and Education Experience, Australia (6278.0) — issued irregularly, latest issue: 1993.

Transition from Education to Work, Australia (6227.0) — issued annually, latest issue: May 1994.

22. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

Symbols and other usages

* subject to sampling variability too high for most practical uses. See the Technical Notes, page 22.

. . not applicable

— nil or rounded to zero

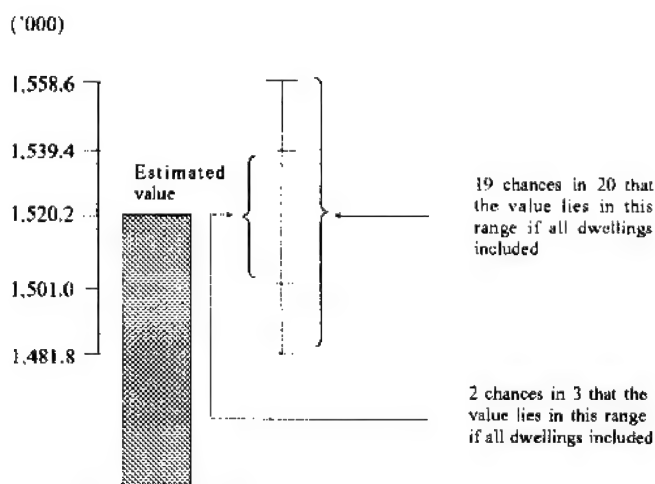

23. Because estimates have been rounded, discrepancies may occur between sums of the component items and totals.

TECHNICAL NOTES

Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability, that is, they may differ from those that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the *standard error*, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the number that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of the likely difference is the *relative standard error*, which is obtained by expressing the standard error as a percentage of the estimate.

2. Space does not allow for the separate indication of the standard errors of all estimates in this publication. A table of standard errors for general application is given on the following page. These numbers will not give a precise measure of the standard error of a particular estimate but they will provide an indication of its magnitude.

3. An example of the calculation and the use of standard errors in relation to estimates of persons is as follows. Table 1.1 of the publication shows the estimated number of trades qualified persons to be 1,520,200. Since this estimate is between 1,000,000 and 2,000,000, the standard error for Australia will be between 16,700 and 21,600 and can be approximated as 19,200 (using the standard error table and rounding to the nearest 100). Therefore, there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall in the range 1,501,000 to 1,539,400 and about nineteen chances in twenty that the value will fall within the range 1,481,800 to 1,558,600. This example is illustrated in the following diagram.

4. As can be seen from the standard error table, *the smaller the estimate the higher is the relative standard error*. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication, only estimates with relative standard errors of 25 per cent or less are considered sufficiently reliable for most purposes. However, estimates with larger relative standard errors have been included and are preceded by an asterisk (e.g. *3.4) to indicate they are subject to high standard errors and should be used with caution.

5. Proportions and percentages formed from the ratio of two estimates are also subject to sampling errors. The size of the error depends on the accuracy of both the numerator and the denominator. A formula to approximate the relative standard error (RSE) of a proportion is given below:

$$RSE (x/y) = \sqrt{[RSE (x)]^2 + [RSE (y)]^2}$$

6. Considering the example from paragraph 3 above, of the 1,520,200 trades qualified persons, 1,264,500, or 83.2 per cent, were working at the time of the survey. The standard error of 1,264,500 is approximately 18,000 so the relative standard error is 1.4 per cent. The relative standard error for 1,520,200 is 1.3 per cent. Applying the above formula, the relative standard error of the proportion is $\sqrt{(1.4)^2 + (1.3)^2}$ or 0.5 per cent, giving a standard error for the proportion (83.2 per cent) of 0.4 percentage points. Therefore, there are about two chances in three that the proportion of trades qualified persons who were working at the time of the survey was between 82.8 per cent and 83.6 per cent and nineteen chances in twenty that the proportion was within the range 82.4 per cent to 84.0 per cent.

7. Published estimates may also be used to calculate the difference between two survey estimates (of numbers or percentages). Such an estimate is subject to sampling error. The sampling error of the difference between two estimates depends on their standard errors and the relationship (correlation) between them. An approximate standard error (SE) of the difference between two estimates (x-y) may be calculated by the following formula:

$$SE (x-y) = \sqrt{[SE (x)]^2 + [SE (y)]^2}$$

8. While this formula will only be exact for differences between separate and uncorrelated characteristics or sub-populations, it is expected to provide a good approximation for all differences likely to be of interest in this publication.

GLOSSARY

Associate diploma: the entry requirement is usually the completion of Year 12 or the completion of Year 10 and a prerequisite certificate course. The duration of study ranges from 1 to 2 years full-time study or equivalent. Courses provide individuals with the knowledge and skills necessary to give support to professionals, and for positions in advanced trade, technical or associate professional occupations. Examples are an Associate Diploma in Business Administration, an Associate Diploma of Engineering in Civil Engineering, an Advanced Certificate in Panelbeating, a Certificate of Technology in Architectural Drafting and a Technician Certificate in Foundry Practice.

Bachelor degree: the entry requirement is the satisfactory completion of Year 12 or its equivalent. The duration of study ranges from 3 to 6 years full-time study or equivalent. Courses are designed to provide students with a systematic and coherent introduction to a broad body of knowledge. The emphasis is on the underlying principles and concepts of that body of knowledge. Examples are a Bachelor of Architecture, a Bachelor of Education in Early Childhood Teaching and a Bachelor of Science in Mathematics or Statistics (Honours).

Basic vocational qualifications: often require Year 10 completion, however many courses have no formal entry requirements. The duration of study ranges from 1 semester to 1 year of full-time study or equivalent. Courses provide individuals with the practical skills and background knowledge necessary for employment at the operative level in many different fields. Examples are a Pre-apprenticeship in Plumbing, a Certificate in Shorthand and Keyboarding, a Traineeship Certificate in Advertising, a Pre-vocational Certificate in Automotive Mechanics and a Certificate of Applied Science in Textile Technology.

Break from the trade: a period of 12 months or more away from the trade after qualifying, with a subsequent return to the trade.

Employed persons: persons aged 15 to 64 who, during the reference week:

- worked for 1 hour or more for pay, profit or commission in a job, business, or farm (comprising employees, employers and self-employed persons); or
- had a job but were not at work.

This definition differs from that given in *The Labour Force Australia* (6203.0). See paragraphs 7 and 8 of the Explanatory Notes for details.

Employee: an employed person who, during the reference week, worked for an employer for wages or salary. This definition differs from that given in *The Labour Force Australia* (6203.0). See paragraphs 6 - 8 of the Explanatory Notes for details.

Employer: an employed person who, during the reference week, worked in his or her own business (including limited liability companies) with 1 or more employees. This definition differs from that given in *The Labour Force Australia* (6203.0). See paragraph 6 of the Explanatory Notes for details.

Field of trade qualification: respondents indicated which of the following best described the field of trade in which they qualified:

- Metal fitting and machining;
- Other metal;
- Electrical and electronics;
- Building;
- Printing;
- Vehicle;
- Food;
- Hairdressing; or
- Other

Respondents who had more than one trade qualification were asked about the first trade qualification that had been formally recognised in Australia (either through an Australian apprenticeship or a recognised Australian tradesperson's certificate).

Frequency of use of trade skills: employed persons were asked which of the following categories best described the use of their trade skills:

- (a) use trade skills daily;
- (b) use trade skills at least once a week;
- (c) use trade skills occasionally;
- (d) never use trade skills

For the tables presented in this publication categories (a) and (b) have been combined under the heading 'Use trade skills at least once a week'.

Full apprenticeship: a legal contract entered into between a person (apprentice) and an employer. The contract requires the apprentice to serve a period of training (usually 4 years) for the purpose of attaining tradesperson's status in a recognised trade classification.

Full-time workers: employed persons who usually worked 35 hours or more per week (in all jobs).

Higher degree: includes doctorates and masters degrees. The minimum entry requirements are usually a masters degree or first class honours for a doctorate and first class honours for a masters degree. The duration of study is a minimum of 2 to 4 years for a doctorate and 2 years full-time or equivalent for a masters degree. This level of qualification is designed to recognise significant contributions to original research or the application of knowledge within a given field of study. Examples are a Doctor of Veterinary Studies, a Doctor of Education in

Curriculum (EdD), a Master of Counselling, a Master of Arts in Sociology and a Fellowship of the Royal Australasian College of Physicians (FRACP).

Industry: classified according to the *Australian Standard Industrial Classification (ASIC)*, 1983. Unpublished industry data are available at the Group (3 digit) level.

Job: employment as a wage or salary earner, unpaid family helper or for payment in kind, or self-employment (with or without employees).

Labour force: persons who, during the reference week, were employed or unemployed, as defined.

Left the trade: persons who had worked in the trade in which they first qualified in Australia and were no longer working in that trade.

Length of first break from trade: the length (in completed years) of the first break taken from the trade after qualifying in Australia.

Level of educational attainment: measures the highest post-school qualification attained by the respondent. For the purposes of the *Australian Bureau of Statistics Classification of Qualifications (ABSCQ)*, 1993, level of attainment is the recognition, by an accredited authority, that a person possesses knowledge and practical ability of a certain quality and quantity. The 7 categories for level of attainment are:

- Higher degree;
- Postgraduate diploma;
- Bachelor degree;
- Undergraduate diploma;
- Associate diploma;
- Skilled vocational qualifications; and
- Basic vocational qualifications.

Note: persons who could not categorise their post-school qualification to one of these levels were classified to 'Other'. Persons who reported attaining a certificate qualification that required the equivalent of less than 1 semester full-time study to complete, or who reported having returned to complete a secondary school certificate, are not considered to have attained a post-school qualification.

Looking for work in the trade: persons who were not working in the trade in which they first qualified in Australia and were looking for work in that trade.

Main English speaking countries: comprises United Kingdom, Ireland, Canada, South Africa, U.S.A., and New Zealand.

Main period employer: the employer for whom the respondent worked the most weeks for wages or salary during the last 12 months. The main period employer need not be the respondent's current employer.

Mean weekly earnings: the amount obtained by dividing the total earnings of a group by the number of employees in that group. The class intervals in the grouped data were in some cases finer than those published in the tables.

Median weekly earnings: the amount which divides the distribution of employees into two equal groups, one having earnings above and the other below that amount. Medians were calculated from grouped data, the class intervals in some cases being finer than those published in the tables. Linear interpolation was used within the class interval in which the median fell.

Occupation: classified according to the *Australian Standard Classification of Occupations (ASCO)*, 1986. Unpublished data are available at the Unit Group (4 digit) level.

Part-time workers: employed persons who usually worked less than 35 hours per week.

Partial apprenticeship: completion of an apprenticeship which had been commenced, but only partially completed, at a previous time, eg. a person could be given credit for overseas training and may only serve part of the normal apprenticeship time in Australia to obtain the trade qualification.

Postgraduate diploma: includes Graduate Certificates. The entry requirement is usually the successful completion of a bachelor degree or an undergraduate diploma. The duration of study ranges from 6 months (for a Graduate Certificate) to 1 year full-time study or equivalent. Courses usually build on undergraduate studies, and are designed to broaden or develop professional knowledge and skills in a related or new area of study. Examples are a Graduate Diploma in Teacher Librarianship, a Graduate Diploma of Business in Hospitality, a Diploma in Clinical Pathology, a Diploma of Education in Special Education and a Graduate Certificate in Business.

Recognised Australian tradesperson's certificate: recognition under the Tradesman's Rights Regulation Act in the metal, electrical or footwear trades; or a certificate from a State Apprenticeship and Training Authority.

Sector: public sector includes all local government authorities and government departments, agencies and authorities created by, or reporting to, the Commonwealth or State Parliaments. All remaining employers are classified as private sector.

Self-employed: an employed person who, during the reference week, worked in his or her own business (including limited liability companies) with no employees. This definition differs from that given in *The Labour Force Australia* (6203.0). See paragraph 6 of the Explanatory Notes for details.

Skilled vocational qualifications: the entry requirement is usually the completion of Year 10 or its equivalent. In addition, some courses may require a student to be concurrently employed in that specific field. The duration

of study is 2 to 4 years, and typically involves some on-the-job training. Courses provide individuals with the knowledge and skills necessary to work in a specific vocation, recognised trade or craft that requires a high degree of skill in a range of related activities. Examples are a Trade Certificate in Vehicle Building, a Certificate in Landscape Design and an Apprenticeship in Electrical Fitting.

Time in trade: the length of time (in completed years) the respondent had worked in the trade after qualifying in Australia. The period prior to qualifying (e.g. time completing an apprenticeship) and breaks of 12 months or more are excluded.

Time in trade before first break: the length of time (in completed years) the respondent had worked in the trade after qualifying in Australia until the first break of 12 months or more was taken. The period prior to qualifying (e.g. time completing an apprenticeship) is excluded.

Trade qualification: completion of an approved trade or technical apprenticeship in fitting and turning, hairdressing, plumbing, carpentry, etc.

Trades qualified persons: persons aged 15 years and over who had:

- obtained a trade certificate following the completion of a 4 year Australian apprenticeship; or
- obtained recognition of a trade qualification or experience in Australia under the Tradesman's Rights Regulation Act, or by a State Apprenticeship and Training Authority.

Undergraduate diploma: the entry requirement is usually the successful completion of Year 12 or its equivalent. The duration of study is 3 years full-time study or equivalent. Courses are designed to provide individuals with the knowledge and skills necessary for practice in a professional or associate professional occupation. Examples are a Certificate in Psychiatric Nursing, a Diploma of Applied Arts in Graphic Design and a Diploma of Teaching (Primary).

Unemployed: persons aged 15 to 64 years who were not employed during the reference week, had actively looked

for full-time or part-time work at any time in the 4 weeks up to the end of the reference week, and:

- were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than 4 weeks to the end of the reference week); or
- were waiting to start a new job within 4 weeks from the end of the reference week and would have started in the reference week if the job had been available then.

This definition differs from that given in *The Labour Force Australia* (6203.0). See paragraphs 7 and 8 of the Explanatory Notes for details.

Unrecognised tradespersons: persons aged 15 years and over who had not completed an Australian apprenticeship nor gained a certificate under the Tradesman's Rights Regulation Act or from a State Apprenticeship and Training Authority, but had either worked as a tradesperson in Australia or had a trade qualification but had not had that qualification formally recognised in Australia.

Unrecognised trade qualifications: Recognition of trade skills or qualifications by a licensing or registration board, union or employer, etc., is not regarded as formal recognition. Trade details relate to either the first trade in which the respondent worked in Australia or the first trade in which qualified but was not recognised.

Usual weekly earnings: the amount of usual weekly pay for wage or salary earners working with their main period employer, before taxation and other deductions were made.

Working in the trade: persons employed in the trade in which they first qualified in Australia.

Year last left trade: persons who had worked in the trade after qualifying in Australia and were no longer working in that trade were asked to specify the year they had last worked in that trade.

Year qualified in trade: the year the respondent first completed an apprenticeship in Australia or gained a recognised Australian tradesperson's certificate.

DATA ITEMS AND HOW TO ORDER SPECIAL TABLES FROM THIS SURVEY

The ABS offers a range of unpublished data from this survey upon request. This section specifies the data items, categories and populations which relate to this survey and includes an order form for special tables (page 36). More detailed breakdowns of some data items are available on request.

The ABS also has State data readily available. A package which contains each of the tables in this publication cross-classified by 'State or territory of usual residence' can be obtained by completing the 'State tables' order form (page 35).

NOTES:

- (i) Refer to the Glossary (page 24) for definitions of data items.
- (ii) 'Level of qualification' and 'Field of study' data items that are broadly comparable with the classifications in the 1989 *Careers Paths of Qualified Tradespersons* publication are available if required.

Special Table Requests

Each table contains six components, described below:

Population:

The population describes the characteristics of persons (or courses) that are applicable to a data item. The population of a table controls the contents of the table, the maximum population being the full scope of the survey (see page 28 for a list of populations).

Heading:

The heading contains the data item that defines the columns of a table. It may involve a number of categories, each of which forms a separate heading element.

Stub:

The stub contains the data item that defines the rows of a table. It may involve a number of categories, each of which forms a separate stub element.

Wafer:

Headings and stubs define a two dimensional array which is called a wafer. An additional data item may be allocated to a wafer to create 'pages' of data. Each category in the additional data item constitutes a new wafer. Wafers may be displayed on the same page (if enough room) or on different pages.

Cell:

The cell contains the data resulting from the intersection of each wafer, stub and heading element.

Table Title:

The table title can be supplied by you and appears on each page (if required). If no title is specified, a default title consisting of the population and the titles of the requested data items is used.

You can specify special table requests by filling in the order form (page 36) or by telephoning the contact officer listed on the order form.

When ordering special tables from this survey, please ensure you identify the **population(s)** and the **data item number(s)** that you require.

For each table requested, the population and at least two data items (i.e. a heading and a stub) need to be identified. Some tables may be subject to high standard errors, though this does not prevent the table(s) being produced.

There are charges involved in the generation of special tables which are listed on the order form (page 36). Special tables can be provided in printed form or on floppy disk.

The ABS aims for a prompt turn-round tabulation service. For a large number of tables or for complex tables, the time needed for table generation may be longer. A time estimate will be given when the table request is accepted.

POPULATIONS

POPULATION NUMBER	POPULATION DESCRIPTION	
POP4211	Population 1:	Trades qualified persons
POP41803	Population 2:	Trades qualified persons who have a job
POP41806	Population 3:	Trades qualified persons working in the trade
POP41807	Population 4:	Trades qualified persons who have worked in the trade
POP41801	Population 5:	Trades qualified persons who have had a break from the trade
POP41804	Population 6:	Trades qualified persons who have left the trade
POP41805	Population 7:	Trades qualified persons who have never worked in the trade in Australia
POP41802	Population 8:	Trades qualified employees
POP421	Population 9:	Unrecognised tradespersons
POP41811	Population 10:	Unrecognised tradespersons who have a job
POP41812	Population 11:	Unrecognised tradespersons working in the trade
POP41816	Population 12:	Unrecognised tradespersons who have worked in the trade
POP41808	Population 13:	Unrecognised tradespersons who have had a break from the trade
POP41813	Population 14:	Unrecognised tradespersons who have left the trade

For more information ...

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the *ABS Catalogue of Publications and Products* available at all ABS Offices (see below for contact details).

Information Consultancy Service

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see Information Inquiries below for contact details).

National Dial-a-Statistic Line

0055 86 400

(Steadycom P/L premium rate 25c/21.4 secs.)

This number gives 24-hour access, 365 days a year for a range of statistics.

Electronic Data Services

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about our electronic data services, contact any ABS Office (see below).

Bookshops and Subscriptions

There are over 400 titles of various publications available from ABS bookshops in all ABS Offices (see below Bookshop Sales for contact details). The ABS also provides a subscription service through which nominated publications are provided by mail on a regular basis at no additional cost (telephone Publications Subscription Service toll free on 008 02 0608 Australia wide).
